

FATIGUESAFE

Rapid Fatigue Self-Assessment

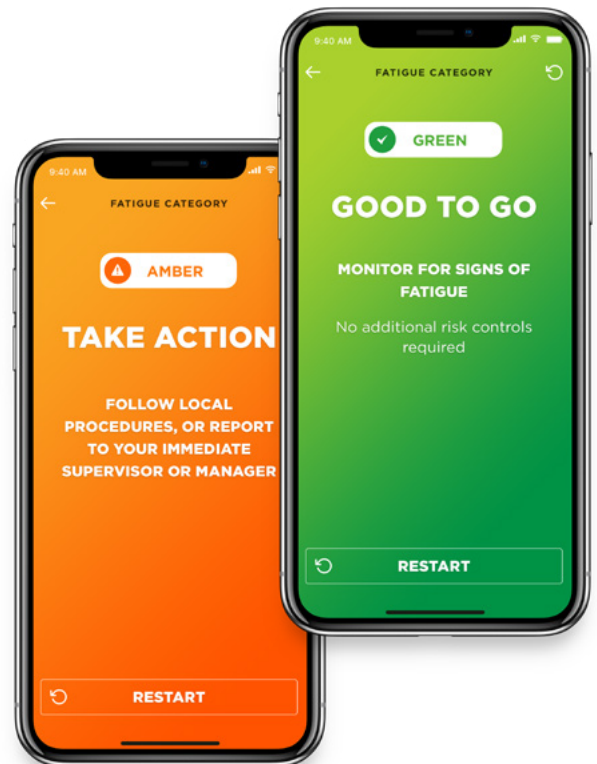

In less than a minute any safety-critical worker can assess personal sleep, alertness and fatigue factors.

FatigueSafe then checks whether the person believes they are fit for work.

DOWNLOAD FROM

- FatigueSafe helps an individual to quickly evaluate their personal fatigue levels. It can be used for work or personal purposes and considers factors such as the individual's current fatigue state as well as their recent sleep quantity & quality, any physical & mental signs of fatigue and more.
- Informed by the science and medicine of personal Fatigue Management and developed in conjunction with real-world industry partners, FatigueSafe is designed to improve any individual's safety, performance and ultimately their quality of life.
- FatigueSafe is proudly made by Integrated Safety Support, an Australian-based company with global expertise related to occupational alertness and fatigue management.
- Use FatigueSafe as a support tool for individuals to rapidly self-assess their fatigue levels before, during and after critical work tasks and/or driving.
- The App can be used in conjunction with the objective performance prediction tool PeakAlert, developed by Integrated Safety Support using cutting-edge AI technology licensed from the US Army.
- FatigueSafe is now available on both the App Store on iOS devices and the Google Play Store for Android.
