

# PEAKALERT

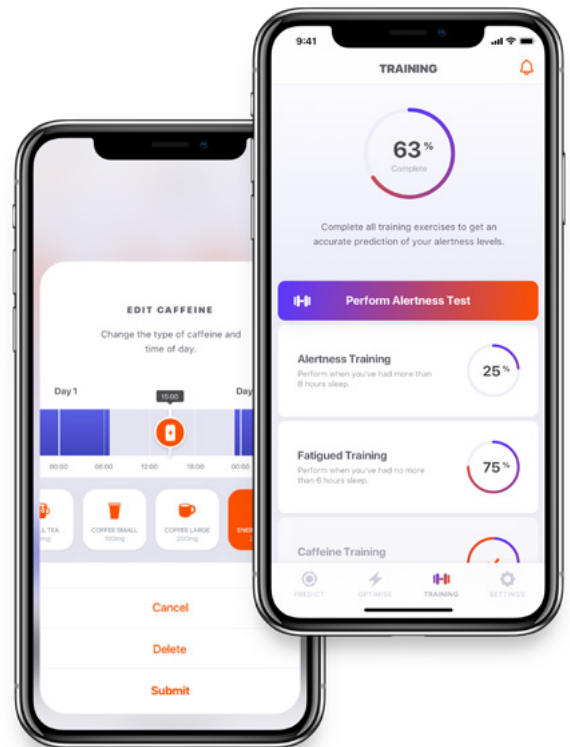

## Experience Peak Alertness

A revolutionary App that uses an AI-powered algorithm licensed from the US Army to track performance, sleep and other data to predict ideal alertness periods.

### DOWNLOAD FROM

- PeakAlert reflects the most cutting-edge technology of its kind available globally.
- The software uses an individual's own performance, sleep and other data to customize an algorithm for each specific user.
- Uniquely, in addition to considering individual sleep patterns and sensitivity to sleep loss, the technology allows for input of caffeine as a performance enhancement tool.
- The US Army Medical Research & Development Command and Integrated Safety Support have signed a Cooperative Research & Development Agreement as well as a Medical Technology Transfer License Agreement related to this App.
- Integrated Safety Support is an Australian-based company with global expertise related to occupational alertness and fatigue.
- The underlying technology has been featured by several media outlets including the Wall Street Journal, Fortune and Newsweek, with more than eight internationally peer-reviewed scientific journal articles also published to support the development and effectiveness of developments to date.
